

Environmental Management

Design4Growth is committed to the sustainable management of the environment and minimisation of harm.

Our objective is to maintain a culture, which ensures the minimisation of harm to the environment through leadership, resource stewardship, processes, education and a demonstrated commitment to this policy.

We:

- Promote a culture in which all employees, sub-contractors and business partners share this commitment,
- Provide and maintain an environmental management system where aspects and associated risks are identified and effectively controlled,
- Set targets, monitor and review performance and ensure continual improvement,
- Promote the reduction of waste through monitoring energy usage across the value chain, recycling and reusing and exceptional planning,
- Provide information and training to all staff to assist in meeting our environmental commitments,
- Comply with all local environment legislation and industry requirements, and
- Ensure that employees, sub-contractors and business partners comply with this framework.

We all have the responsibility and accountability to respect and enhance the environment in the communities in which we operate. By following these principles we will achieve an environmental performance of which we are proud.
